

PVD3X3M

Proportional Valve Driver, direct DIN solenoid mount, 3m cable 4 x AWG18

BENEFITS AND FEATURES:

- Versatile digital design
- Large, easy-to-use adjustments and three-digit seven-segment LED display
- Wide range of supply voltage
- Electronic limiting circuit / short circuit proof
- Load can be connected & disconnected live
- Protected against wrong connection
- Energy-efficient PWM circuit, no heat sink is required
- Current sensing maintains output regardless of changes in supply voltage and coil resistance
- Completely sealed even during set-up
- Simple control with analog input
- Thick wall, sturdy housing made of flame retardant plastic UL94-V0
- Mounting: DIN 43650-A/ISO 4400 solenoid
- Easy troubleshooting

PVD3X3M

SPECIFICATIONS:

- Operating voltage: 9 - 35VDC
- Maximum output current: 3A
- Ramp time: 0.0 to 99.5s
- Linearity: 0.5%
- PWM / Dither frequency: 50-500Hz
- Operating temperature: -40° to +75° Celsius
- Protection grade: IP67**
- Input signal: differential +/-10V
- Size: 2.5" long (3.5" with cable gland) x 1.5" wide x 1.4" deep

** when properly assembled using the brown gasket (included in the package) between solenoid and driver

This product fulfills the essential requirements of
the EMC Directive 2004/108/EC: EN61000-6-1:2005, EN61000-6-3:2006

PVD3X3M

Proportional Valve Driver, direct DIN solenoid mount, 3m cable 4 x AWG18

SETTINGS AND RANGE:

- HI** High, output current corresponding to the highest input, 0.00 to 3.00 A
- JS** Jog, used to simulate signal, 0.00 to 3.00 A
- LO** Low, output current corresponding to the lowest input, 0.00 to 3.00 A
- UP** Ramp up, time required for the output to increase from LO to HI, 00.0 to 99.5 s
- dn** Ramp down, time required for the output to decrease from HI to LO, 00.0 to 99.5 s
- db** Deadband, output is disabled when command signal is less than this setting, in %
- df** Dither frequency, 050 to 500 Hz
- in** Input signal selection, 0 10 (differential +/-10V)
- di** Display orientation, normal or up-side-down
- SA** Save settings

SET-UP PROCEDURE:

At power up, you may rotate **#** clockwise to read the actual solenoid output current directly in Amps or counterclockwise to read the command input signal in V or mA, corresponding to the input range pre-selected. To enter set-up mode, rotate *****; the display will show the settings sequentially: **HI**, **JS**, **LO**, **UP**, **dn**, **db**, **df**, **in**, **di** and **SA**.

When you reach the setting that you want to modify, rotate **#** up or down to the desired value. To modify another setting, rotate ***** and repeat. The Driver is fully functional during the set-up procedure with any adjustments effective immediately. In order to write the new settings in the memory and return to normal mode of operation, rotate ***** until the display shows **SA** and then rotate **#** one full turn. If you do not want to keep the new settings, simply power down without saving.
